Assortment Overview of Double-Sided Tapes

The World of Bonding Applications

As a leading global manufacturer of adhesive solutions, our qualified experience comes with a deep understanding for expert services. For this reason, we offer a wide range of specially developed double-sided tapes that effectively meet the application requirements of our customers.

The result: an assortment of adhesives, liners, and backings providing custom bonding solutions for a diverse field of business.

Advantages of Double-Sided Tapes vs. Liquid Glue and Mechanical Fastening

		Double-sided tapes	Liquid glue	Mechanical fastening (e.g., rivets, screws, nails)
Quality

Double-Sided Tapes for Varied Applications

Overview		4 – 5
▪ Our double-sided adhesive system ▪ Release liner categories ▪ Construction of our double-sided tapes ▪ Test methods		
	Filmic tapes ▪ High tensile strength ▪ Well suited for the production of die-cuts ▪ Suited for high-speed manufacturing processes	6 – 9
	Non-woven tapes ▪ Flexible and extremely conformable ▪ Easily hand tearable, yet tear resistant ▪ Cushioning features	
	Paper tapes ▪ Flexible ▪ High temperature resistance ▪ Hand tearable	10 – 11
	Cloth tapes ▪ Flexible ▪ High temperature resistance ▪ Thick backings are abrasion resistant	12 – 13
	Differential ▪ Differential adhesive coating weight on both sides of the backing ▪ Strongly differing peel adhesion	
	Transfer (without backing) ▪ Flexible and extremely conformable	14 – 15
	Foam tapes ▪ Compensation of tension, gaps, and irregular surfaces ▪ Shock absorption ▪ Sealing function against dust and moisture	16 – 19
	tesa®ACX^{plus} ▪ Viscoelasticity ▪ Bonding power ▪ Stress dissipation ▪ Temperature and weather resistance	20 – 21
Application tips and storage ▪ Application tips for double-sided tapes ▪ Storage ▪ The right double-sided tape solution for your requirements ▪ Our offering		22 – 23

excellentquality

Discover the Benefits of Our Double-Sided Tapes

Our Double-Sided Adhesive Systems

Pure acrylic	Attributes
Pure acrylic adhesive is especially suitable for outdoor applications and applications at elevated temperatures. Polymerization, compounding, and coating in-house	- Good adhesive strength on polar and pretreated non-polar surfaces - Very good at elevated temperatures - Aging resistance - Resistance against environmental conditions (e.g., UV, humidity)
Tackified acrylic	Attributes
Tackified acrylic is a versatile adhesive with a well-balanced performance on a wide variety of surfaces for permanent applications. Polymerization, compounding, and coating in-house	- Very good adhesive strength on polar surfaces, good on non-polar surfaces - High initial adhesion power - Aging resistance - Resistance against environmental conditions (e.g., UV, humidity)
Synthetic rubber (SiS)	Attributes
SiS adhesive is suitable for a variety of surfaces but offers limited aging and temperature resistance. Compounding and coating in-house	- High immediate adhesive bonding strength - Good shear resistance - Very good bonding on polar and non-polar surfaces
Natural rubber	Attributes
Natural rubber adhesive is extremely sticky for use on rough surfaces. Compounding and coating in-house	- High immediate adhesive bonding strength - Very good bonding on polar and non-polar surfaces - Preferred for use in indoor applications

Release Liner Categories

Product features/advantages	Color	Thickness [μm]	Weight [g/m²]	Breaking force [N/cm]
Siliconized paper - Low electric discharge - Stable under pressure due to hard paper core	Brown	70	82	>63
PE (polyethylene) coated paper - Good tensile strength - Excellent die-cutting properties - Excellent humidity resistance	White	122	120	>73
PP (polypropylene) release film - Dust-free convertibility - High tear resistance - Safe use in automated processes	Red	80	72	>180
		120	108	>180
PET (polyethylene terephthalate) release film - Excellent tear strength - Good thickness tolerance - Dust-free processing	Transparent	50	72	>70
		75	109	>100
PE (polyethylene) release film - Flexible and soft for easy application on curved surfaces - No fraying during the sawing process	Dark blue	100	94	>16

Construction of Our Double-Sided Tapes

Structure of double-sided adhesive tapes

Our double-sided tapes consist of three main components:

- Backing**
The backing is relevant for some of the main features of a double-sided tape. For rougher surfaces thicker foam tapes come into play. Filmic tapes can be used for transparent bonding requirements and tesa®ACX^{plus} tapes are able to dissipate stresses thanks to their viscoelastic characteristics.
- Adhesive system**
The proper choice of the adhesive system depends on how the double-sided tape is to be used: the kinds of surfaces which are to be bonded, how long the bond is supposed to last, and whether it is an indoor or an outdoor application.
- Liner**
The liner covers the adhesive system and is an important element for the application and removal process. Filmic liners are usually used for automatic and paper liners for manual applications.

Test Methods

Peel adhesion
Adhesive strength describes the bonding power of the tape to steel. Hence, the value is an important parameter in any application. Its value depends significantly on the surface characteristics, the pressure, and the time exposed to the bonding materials. A tape's peel adhesion is measured in N/cm by peeling the tape at a 90° angle at a constant speed of 300 mm/min from the test substrate after 72 hours' dwell time.

Static shear resistance
Shear resistance is defined by the inner cohesiveness of an adhesive and describes the holding power of a tape in a product application. Thus, shear resistance applies when the tape encounters high stress in the product application. A tape's shear resistance is measured in minutes by loading the tape with 5 N when adhered to a steel substrate on a 2.6 cm² bonding area at a temperature environment of 23°C and 50 percent humidity.

Temperature resistance
Temperature resistance characterizes the holding power of a tape in a product application at elevated temperatures. It is divided into short term (15 minutes) and long term (three months). Subsequently, the tape's shear distance over the time is evaluated at elevated temperatures.

dimensionallystable

Filmic Tapes: Ideal for Bonding to Flat, Smooth Surfaces

Technical Information: Filmic Tapes – Part 1

Product	Product description and application	Backing	Adhesive	Color	Thickness without liner [µm]	Ultimate peel adhesion [N/cm]			Shear resistance 23°C	Temperature resistance [°C] short/long term
						Steel	PVC	PE		
tesa® 4926	Thick double-sided tape with excellent bonding power on critical surfaces. The thick coating weight supports cushioning and gap filling. tesa® 4926 is mainly used for mounting components in the consumer electronics industry.	PET	Tackified acrylic	Transparent	250	16.2	16.5	6.5	● ● ●	200/100
tesa® 4965	Exceptional bonding performance on critical surfaces and rough materials. tesa® 4965 shows excellent holding power at elevated temperatures and high initial adhesion power. It is used for a broad variety of applications, for example mounting of ABS/PE/PVC parts.	PET	Tackified acrylic	Transparent	205	11.8	13.0	6.9	● ● ●	200/100
tesa® 51865	tesa® 51865 Profile FIT is the first asymmetrical filmic tape designed to fit the needs of trim and profile applications. The higher coating weight is located on the closed side of the tape to work on a great variety of surfaces.	PET	Tackified acrylic	Transparent	165	13.5/10.5*	14.0/11.0*	8.0/7.0*	● ● ●	200/100
tesa® 4967	Well-balanced ratio of adhesive power and shear strength combined with outstanding humidity and temperature resistance. It is used in signage, splicing, and laminating trims and profiles.	PET	Tackified acrylic	Transparent	160	13.4	11.9	5.7	● ● ●	200/100
tesa® 4928	For bonding of various polar (ABS, PC) and rough surfaces, for example signs, scales, or blinds. Balanced ratio between adhesion power and shear strength.	PET	Tackified acrylic	Transparent	125	12.0	10.1	5.4	● ● ●	200/100
tesa® 4982	Excellent combination of high adhesion power and shear strength. Often used for bonding components in the consumer electronics industry. tesa® 4982 has an excellent temperature resistance.	PET	Tackified acrylic	Transparent	100	11.7	10.0	5.1	● ● ●	200/100
tesa® 4980	Good bonding strength on most common smooth and even substrates. Reduced immediate contact adhesion makes initial repositioning possible. Used for mounting nameplates, badges, and light signs as well as decorative profiles in the furniture industry.	PET	Tackified acrylic	Transparent	80	9.7	10.7	4.6	● ● ●	200/100
tesa® 4972	Thin product with high adhesion level relative to its thickness. tesa® 4972 allows repositioning and shows excellent resistance to demanding environmental conditions. Used to mount plastic badges and signs as well as components in the consumer electronics industry.	PET	Tackified acrylic	Transparent	48	9.6	9.4	3.5	● ● ●	200/100
tesa® 4983	Very thin product with good adhesion level and excellent resistance to demanding environmental conditions. tesa® 4983 shows outstanding handling performance in converting processes and is used for bonding smaller components in the electronics industry.	PET	Tackified acrylic	Transparent	30	7.6	6.4	3.3	● ● ●	200/100
tesa® 51977	Excellent initial tack and adhesion level, especially designed for carpet-laying applications and mounting of heavy decorative materials and displays.	PP	Tackified acrylic	White	240	12.5	16.0	8.5	● ● ●	110/50
tesa® 51970	Exceptional bonding results on smooth and uneven surfaces. tesa® 51970 has an excellent balance between adhesion power and shear strength combined with high aging resistance. It is used for mounting solid decorative components, displays, and signs.	PP	Tackified acrylic	Transparent	220	13.5	17.5	8.0	● ● ●	120/60
tesa® 64620	Very high initial bonding power, even on hard-to-bond and non-polar surfaces. Limited aging and temperature resistance. Applicable for example for mounting of building and furniture components and lamination of magnets.	PP	Synthetic rubber	White	185	14.5	10.0	8.0	● ● ● ●	80/40
tesa® 64624	Exceptional high initial bonding power and high adhesion power on critical surfaces such as PE or PP. tesa® 64624 is used for example for temporary fixing of trims and profiles under normal temperature conditions.	PP	Synthetic rubber	Transparent	170	15.9	15.1	9.3	● ● ● ●	80/40

Corrugated closure, for example:

- tesa® 51970
- tesa® 64624

Shelf edge strips, for example:

- tesa® 4965
- tesa® 51865

Magnetic strips, for example:

- tesa® 51865*
- tesa® 4967

Mounting of transparent signs and displays, for example:

- tesa® 4965
- tesa® 51970

Mounting of profiles on various surfaces, for example skirtings and wall edging strips, for example:

- tesa® 4970

Decorative trims, for example:

- tesa® 51970
- tesa® 51865

*side with lower coating weight

The Foam System

PE foam and major features

- The backing material of our double-sided foam tapes is composed of closed-cell PE foam. Through the targeted variation of the polymer, thickness, and density of the foam, each tape achieves the optimum properties for its specific tasks.
- Mechanical resistance
 - Service temperature between –40°C and +70°C
 - UV resistance (no yellowing or degrading)
 - Shock absorbing even at low temperatures of –40°C
 - High dielectric strength
 - Water resistant and vapor barrier

tesa®ACX^{plus}: For Permanent and Constructive Bonding

Technical Information

						Ultimate peel adhesion [N/cm]					
Product	Product description and application	Backing	Adhesive	Color	Thickness without liner [µm]	Steel	PMMA	Aluminum	Glass	Shear resistance 23°C	Temperature resistance [°C] short/long term
GRAY AND WHITE											
tesa®ACX ^{plus} 7042	High-performance acrylic foam tape, primarily characterized by its bonding power, stress dissipation, and temperature and weather resistance. The tesa®ACX ^{plus} 704x series is specially designed to allow invisible bonding of decorative elements.	Foamed acrylic	Pure acrylic	Gray/white	500	23	18	24	21	● ● ● ●	200/110
tesa®ACX ^{plus} 7044		Foamed acrylic	Pure acrylic	Gray/white	1,000	33	24	35	32	● ● ● ●	200/110
HIGH TRANSPARENCY											
tesa®ACX ^{plus} 7054	Ultra-transparent pure acrylic tape for bonding of transparent and translucent materials such as decorative glass panels, PMMA plates, extruded profiles, and glass partition walls. High UV, temperature, and solvent resistance. Recommended for outdoor applications. Due to its viscoelastic properties, tesa®ACX ^{plus} can compensate for varying substrate thermal elongations.	Solid acrylic	Pure acrylic	Transparent	500	19	12	19	17	● ● ● ●	200/100
tesa®ACX ^{plus} 7055		Solid acrylic	Pure acrylic	Transparent	1,000	24	17	24	24	● ● ● ●	200/100

tesa®ACX ^{plus} 75530		Solid acrylic	Pure acrylic	Transparent	2,900	27	20	26	32	● ● ● ●	200/100
HIGH ADHESION											
tesa®ACX ^{plus} 7062	Black acrylic foam tape with excellent immediate adhesion even on substrates with a low surface energy such as PP and powder-coated materials. Also resistant to plasticizers. Excellent bond on long-length parts such as bumper rails, as well as powder-coated signs, reinforcement bars in elevators, and decorative parts on white goods.	Foamed acrylic	Modified acrylic	Black	500	24	20	27	27	● ● ● ●	170/70
tesa®ACX ^{plus} 7063		Foamed acrylic	Modified acrylic	Black	800	30	27	32	32	● ● ● ●	170/70

HIGH RESISTANCE											
tesa®ACX ^{plus} 7072	Black acrylic foam tape which combines a very good temperature resistance with an outstanding cold shock resistance. It is suitable for demanding outdoor applications and exposure to extreme temperatures, UV, chemicals, salt water, and cleaning agents. Recommended for reinforcement bar mounting, wall cladding, back rails, and decorative elements.	Foamed acrylic	Pure acrylic	Black	500	20	12	18	20	● ● ● ●	220/120
tesa®ACX ^{plus} 7074		Foamed acrylic	Pure acrylic	Black	1,000	30	15	25	32	● ● ● ●	220/120

versatilepossibilities

Made to Meet the Requirements of Our Customers

Application Tips for Double-Sided Tapes

Surface preparation and cleaning
The surface should be free of dust, grease, oil, moisture, and other contaminants as they will decrease the level of bonding power significantly.

Temperature
Recommended optimal application temperature is from 20°C to 30°C in dry rooms. If possible, tapes should not be applied at temperatures below 10°C unless the tape is designed for application at low temperatures.

Application
The tape should be applied to the surface at constant speed and pressure. For optimal results we recommend a uniform pressure, applied with an automatic or manual roller.
After the final position is reached and both parts are mounted together, we recommend a uniform pressure at 20 N/cm² over the complete area of the mounted components.

Bond build rate
The bond strength will increase over time until full strength is reached after approximately 72 hours.

The Right Double-Sided Tape Solution for Your Requirements

We offer you a wide range of different products, supporting you in all areas of your business.

At tesa, mutual trust and cooperation goes far beyond the implementation of adhesive tape solutions. Our consultants and application engineers guide the way to the efficient and economic use of our products in all manufacturing steps. Our laboratories provide the means and tools necessary for extensive application testing to simulate a wide range of extreme requirements and analyze critical materials and surfaces.

In our application laboratories, we analyze customers' materials in combination with several adhesive tape solutions. Depending on the customer-specific demands, the analysis includes tests on the resistance to UV light and high and low temperatures, peel adhesion, shock and tension absorption, and much more.
The result: adhesive tape solutions that are perfect for any technical application.

Benefit: the best customer-specific solution that meets all requirements.

Our Offering

No matter what industry, no matter what your production process or how you want to apply your tape: whether die-cuts, pancake rolls, or spools and logs, we deliver the tape in the format you need for your application.

Together with our adhesive tapes, we offer dispensing and application tools for high-quality application results regardless of whether your production process is manual or highly automated. Our solutions allow you to implement a fast, simple, and clean assembly process, while reducing your total production costs. Our consultants and engineers are just a phone call away to support you with a proper dispensing solution and to make your production more efficient with the use of a double-sided tape solution.

Choose us and benefit from a strong partnership.

Our products prove their impressive quality day in, day out in demanding conditions and are regularly subjected to strict controls. All information and recommendations are provided to the best of our knowledge on the basis of our practical experience. Nevertheless, we do not make any warranties, expressed or implied, including, but not limited to, any implied warranty of merchantability or fitness for a particular purpose. Product characteristics, usability, and durability of the product can be taken solely and exclusively from the instruction manual and depend on proper usage and expert realization in its respective application. Therefore, the user is responsible for determining whether our product is fit for a particular purpose and suitable for the user's method of application. If you are in any doubt, our technical staff will be glad to support you.

Storage

Adhesive tapes should be stored at temperatures between 15°C and 35°C avoiding high humidity (optimal: 18°C and 55 percent humidity).

Especially for tesa®ACX^{plus}: all slit edges should be covered with suitable separators made of siliconized film. If several rolls are stacked use two sheets per roll.

Ensuring no dust, dirt, or contamination during transportation and storage will prevent any damage or deformation of the packaging.

08/2015

Our management system is certified according to the standards ISO 9001, ISO/TS 16949, and ISO 14001.
